Description

Non-detectable warning tape is polyethylene plastic tape printed with a black warning message to identify the danger of the service laid beneath. Manufactured in accordance with AS2648:1:1995 to Australian and New Zealand Standards. Non-detectable warning tape should be laid over underground services halfway between the service and the surface in the trench so that a warning can be given before any damage to the service is caused during an excavation.

- Manufactured from low-density polyethylene
- Lead-free pigments with virgin grade film
- Soil tolerance from pH 2.5 to pH 11.0 inclusive
