

Vehicle Mine Whip Flags

Product Images

Description

Bronson Safety Vehicle Flags (also known as safety flags) are made in Australia and are **fully approved for use on mine sites in every state**.

All materials used in the manufacture of our safety flags are of the highest quality, including the fibreglass pole, durable synthetic flag, and fluorescent reflective tape (used for crosses when required). All poles are of a standard thickness through the entire length of the pole, ensuring consistency of quality and durability. This design is also more resistant to fracture and splintering than other makes.

- Product complies to Australian mine site requirements.
- Available in 3 popular versions and a wide range of popular lengths.
- COLOURS: Orange vehicle flags will ship immediately. Lime vehicle flags available upon request.
- IMPORTANT NOTE: At high speeds, flag poles are known to bend and whip outwards. For this reason, Bronson Safety recommends that **a vehicle should not exceed 60kms** when a flag pole is attached.
