

Heavy Duty Steel Corner Post

Product Images

Description

Solid steel construction provides the strength and stability to anchor heavyweight fencing mesh or long runs of bunting flagging without bending or breaking. Can be driven into hard, stony ground without bending. Powder-coated in Hi-Vis Yellow for extra visibility. No sharp edges like the ones found on star pickets.

- Ideal for hard soils where extra strength is required. eg. Construction sites, school ovals, sporting fields, landscaping and rejuvenation areas.
- Dimensions: 1200mm overall length. Strong 20mm thick solid steel construction.
- **NOTE: Posts must be used with fencing mesh, rope or bunting to create a barrier. (Available separately)**
